As a manufacturer of Oily Water Separators, I have been looking for an easy, cost effective method to service your separator. If the separator were easily and effectively cleaned on a monthly basis, it would eliminate the need to open the unit and physically clean the internals. Physical cleaning is always time consuming, very messy, and costly, as new parts, gaskets and coalescer media are needed. Because it is a messy job, it is often avoided, thus reducing the separator's performance. As a result, the quality and quantity of the discharge is effected and the separator may actually be discharging in excess of the allowed 15 ppm. This could result in stiff fines.

SWR Corp. has developed a very unique cleaning product, specifically designed for separator cleaning problems. SWRone concentrate can be added directly to the separator tank. One quart of SWRone, will completely permeate the water/oil in the tank. Mixing is not necessary. It works by isolating the water from the oil and expels the oil and other contaminants from the water. It causes the collected oils to be released from the coalescer media, side walls, baffles, etc. and collect in the top of the tank. SWRone also works amazingly fast. It will do a very effective job if allowed to remain in the separator for a few hours. Ideally, if allowed to remain overnight the product will be more effective. The collected waste is manually backflushed to the waste oil holding tank. The separator is then returned to service. SWRone will continue cleaning the holding tank, removing the oil from the collected sludge. The Oil Content Monitor lenses are also cleaned in the process, an additional benefit.

SWRone is completely Separator/OCM safe, bio-degradable, non-flammable, non-toxic, environmentally safe, and very user friendly. You will soon discover many additional cleaning uses for SWRone aboard ship.

The cost per monthly cleaning is about \$10.00. SWRone is packaged in quart size bottles and is easily handled and stored. As you can see from the cost, it is very economical and cost effective.

Take an additional moment to read the enclosed product description. I think you will realize what SWRone can do for you. If you have any questions, or would like to try this process please feel free to call.

Sincerely,

William Lange
